

OSH Receives donation of air sampling equipment and training materials

**Dustin Payne: Anadarko Petroleum Company
Dr. Hal Poovey, Dr. Nick Nichols, Dr. Chris Bradshaw**

Occupational Safety and Health receives donation of air sampling equipment and training materials.

The Department of Occupational Safety and Health recently received a variety of Multi-gas air sampling equipment and Crane training manuals from Anadarko Petroleum Corporation EHS representative Dustin Payne, CSP. Mr. Payne is a 2007 graduate of the Southeastern Occupational

Health and Safety program. According to Dr. Wayne Jones, OSH department chair, Mr. Payne is constantly seeking ways to donate equipment and hire Southeastern occupational safety students. "He's an shining example of what many safety alumni do in giving back to our program!"

The donated equipment includes 8 Biosystems multivision four gas meters, 2 MSA Solaris and 1 MSA Orion multigas meters, 2 Thermo Genesis and 1 Scott Instruments four gas meters and 3 BW personal four gas meters. Included in the donation were 30 crane training manuals, data processing software, manuals and spare parts. It is estimated that the value of the donated materials is approximately \$5,000.

Generous gifts like this from our alumni enhance our ability to enrich the students learning experience in the field of Occupational Safety and Health. Our heartfelt thanks go to not only Dustin Payne and Anadarko for their contribution but to others who, in the past, have supported the Southeastern occupational safety and health program.
